Centralized Cloud Management for IACBOX

With iacbox.cloud, you can conveniently manage all your IACBOX devices from the cloud - centrally, securely, and from anywhere. The platform combines a clear overview of your devices with flexible remote access, automated processes, and reliable backups. This ensures full visibility at all times, saves valuable time, and enhances the security of your network infrastructure. Whether it's status monitoring, remote maintenance, or data aggregation, iacbox.cloud makes IT management simpler and more efficient. The solution is designed for IT teams and service providers who need full control over distributed IACBOX environments without increasing operational complexity.

Basic Package: Essential Features
The Basic version includes remote access, cloud backups (7 days), status monitoring, and simple commands such as reboots or updates. It is ideal for fundamental management and security needs.

Pro Package: Advanced Tools for Professionals
The Pro version (from Release 24.1.0) additionally offers 14-day backups including logs, mass configuration (batch jobs), and advanced settings such as DNS filtering or Application Control. It is perfectly suited for complex networks and automation.
